Introducing The "Canada Strong Clamp"!

These Canadian Made low-profile clamps are ideal for securely gripping the side of a workpiece to keep the top clear for machining, especially when a large clamping range is required to accommodate workpiece size variations. Versatile clamping allows for positioning the clamp at any angle along the T-Slot. The serrated jaw slides at a 45° angle to exert clamping force both forward and downward simultaneously. Clamp by tightening the socket-head screw in the sliding jaw with a hex wrench.

Dimensions in Inches – clamp width is 1.128"

**IN STOCK AND
READY TO SHIP**

Nickel plated hardened S7 material provides these clamps with excellent durability!
Compatible with 1/2-13 T-Nuts (1/2-13 Main Body Screw and T-Nut Not Included).
