MORSE Taper Pipe Taps
List No. 2119 Regular Thread and List No. 2113 NPT-Interrupted

- Regular Thread NPT taper pipe taps are commonly used for tapping pipe fittings and couplings in a wide variety of materials. Assembly requires the use of a thread sealant to ensure a tight seal
- NPTF Dryseal taper pipe taps produce threads where a tight seal is achieved during assembly by metal-to-metal contact. Used for applications requiring a tight seal without the use of thread sealants
- Interrupted Thread taper pipe taps reduce friction, increase chip capacity and enhance coolant flow to the cutting teeth for reduced chance of torn threads and improved thread quality. Recommended for a wide variety of materials, especially soft ductile materials and materials producing long continuous chips

Solid Carbide 4-Flute AlTiN

Single End Mills

- 4 Flute End Mills feature four cutting edges, providing increased tool strength and rigidity compared to tools with fewer flutes. The additional cutting edges allow higher feed rates per revolution while distributing cutting loads more evenly across the tool
- AlTiN (Aluminum Titanium Nitride) is an advanced PVD coating engineered to withstand high cutting temperatures and demanding machining conditions. The aluminum content forms a protective aluminum oxide layer during cutting, which acts as a thermal barrier and helps protect the cutting edge from heat and oxidation
